CALL FOR PAPERS

Plant Physiology[®] Focus Issue on Plant Cell Walls

Deadline for Submissions: February 1, 2010

To submit an article, please go to <http://submit.plantphysiol.org>.

Plant Physiology is pleased to announce a Focus Issue on Plant Cell Walls to be published in June 2010. The issue will be edited by Jocelyn Rose and Maureen McCann. It will focus on the functions of cell wall components in the molecular architecture of the wall and in plant growth and development, including interactions with endogenous mechanisms of signal transduction, or in response to pathogens or other environmental stimuli. Research articles reporting on all aspects of cell wall biology from genetic functional analysis to biophysical studies will be considered.

Authors interested in contributing should indicate this in their cover letter when submitting papers online at <http://submit.plantphysiol.org/>. Please select "Plant Cell Walls (June 2010)" from the Focus Issue list in the online submission system. Articles published within 2 years before and after the Focus Issue will be considered for inclusion in an online Focus Collection of articles relevant to the focus topic (see <http://www.plantphysiol.org/cgi/content/full/142/2/379> for an editorial about Focus Collections).

Please contact Maureen McCann (mmccann@bilbo.bio.purdue.edu) or Jocelyn Rose (jr286@cornell.edu) for additional information.
